

# Looking Closer Pays Off: The TEKU® AddedValues of the **VTG, VCG and VCH Series.**

Helmut Lörcks:

# “Reliable!”

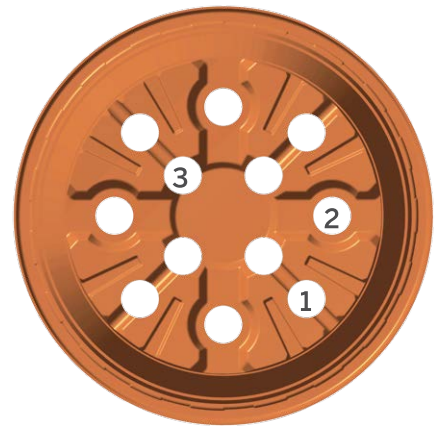

Helmut Lörcks loves being surrounded by plants. Under 23,000 square metres of glass and on approx. 10 hectares of open land, his company now cultivates numerous different varieties. Active collaboration with employees, customers and suppliers also motivates him every day. Together with his team, he constantly strives to provide his customers with outstanding quality. In this context, a high degree of reliability is extremely important to him – both in terms of his work with suppliers and for his own production.

See what it takes to keep everything running smoothly at the Lörcks family-run business, learn about the business succession arrangements and how the products are distributed in cooperation with Pöppelmann TEKU®. – Watch the complete interview.

#### Multi hole profile bottom

- 1st level with direct base contact and additional watering and drainage channels
- 2nd level with distance to contact surface: for fast drainage and maximum aeration
- 3rd level with drainage opening on the sloped sections (internal side slits)

#### Your advantages:

Complete and fast watering and drainage as well as aeration on three levels. For problem-free processing on conveyor belts, there are no mounting feet in the TEKU® VTG, VCG and VCH series.

More advantages for you all round: Benefit from **TEKU® AddedValues** every day with the VTG, VCG and VCH Series.

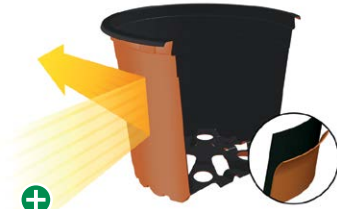

### Better Plants.

#### Reduced cultivation time

The multi hole profile bottom ensures rapid growth and healthy plants with ideal watering and drainage.

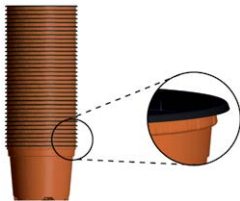

#### Very low failure rates

Roots are not adversely affected or damaged by exposure to light.

### Maximum Efficiency.

#### Easily stacked

The pots are stacked using the patented facet rim – for error-free stacking.

#### Easy denesting from the stack

The facet rim and high degree of lateral stability ensure easy denesting from the stack in the pot magazine.

#### Maximum stability

With no mounting feet, the pots are more stable on conveyor belts.

#### Better handling

Broad U-shaped rim for modern automatic pot handling machines.

#### Reduced transport costs

The optimal diameter and improved fit increase loading quota per CC container.

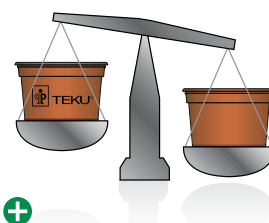

### Effective Sustainability.

#### Use of recycled materials

Careful preparation and intensive use of recycled plastics.

#### Reduced weight

Unrivalled low materials usage thanks to continuous design optimisation.
